

Glade Pit Uranium Mine

M/037/004

The Glade Pit was an abandoned 100 foot deep pit in the Manti-LaSal National Forest. The site is located northwest of Blanding on Elk Ridge. Energy Fuels Nuclear developed a drift off the bottom of the pit in the late 1970's and reclaimed the pit in the summer of 1983. Total surface disturbance was approximately 20 acres.

Reclamation consisted of:

- (1) clean up and burial of low grade ore
- (2) relocating the adjacent forest service road
- (3) smoothing and flattening of the pit and dump contours (3-1 slopes)
- (4) riprapping portions of the channel
- (5) covering the disturbed area with available topsoil
- (6) reseeding

Note: Pictures of reclamation are needed.
